Risk and reward profile

What does this synthetic indicator mean?

- The shares of class B are classified in category 3 because the value of the share may be subject to medium variations and consequently the risk of loss and the opportunity of gain may be moderate.
- The risk category has been determined on the basis of simulated data and may not be a reliable indication of the future risk profile. The risk and reward category shown does not necessarily remain unchanged and the categorisation of the fund may shift over time.
- The lowest category does not mean a risk-free investment.
- Repayment of the initial investment is not guaranteed.

Which materially relevant risks are not adequately captured by the synthetic indicator?

- The investment in debt instruments bears a credit risk insofar as the issuer may refuse or be in a position where it is not able to reimburse all or part of the interests or even of the principal due on the debt instruments. This may result in significant or even total losses of the value of the investments in these debt instruments.
- The investment in emerging markets exposes the sub-fund to risks related to political, regulatory, financial or fiscal instabilities or uncertainties that may negatively affect the value of the investments or even question the ownership title of the sub-fund.
- Other risk factors, that an investor shall take into account with regards to his own situation and specific current and future circumstances, may exist.

How can I get more information about the risks of the sub-fund?
